Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 24 April 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.

DETAILED ACTION

Response to Amendment

1. The present Office action is made in response to the amendment (Paper No. 17) of 4/24/2003.

Claim Rejections - 35 USC § 102

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 1 and 57 are rejected under 35 U.S.C. 102(b) as being anticipated by Miyamoto (U.S. Patent No. 5,678,080, of record).

Miyamoto discloses a camera having a case supporting a viewfinder. The viewfinder as described in columns 4-5 and shown in figures 9-10 comprises an objective lens unit (11) for forming an inverted image (43a) of an object (43); an image inverting unit (41 and 45) for inverting the inverted image (43a) to non-inverted erecting image (43d). The image inverting unit (41 and 45) comprises two transparent bodies wherein the first transparent body (41) has only a function of transmitting a ray of light and a second body has only a function of reflection of a light ray. With regard to the use of an eyepiece after the image inverting unit, in other embodiment, columns 2 and 7, figs. 1 and 11, Miyamoto teaches the use of an eyepiece lens unit for enlarging the image to be viewed by an observer. It is noted that the interval defined between the exit surface (41b) of the transparent body (41) and the entrance surface of the second transparent body (45) is not uniform. With regard to the feature that the second prism has a total reflective

Art Unit: 2872

surface facing the first transparent body, such a feature is also read from the art of Miyamoto because the second transparent prism (45) has only one reflective surface and two transmissive surfaces wherein the only reflective surface is the surface disposed adjacent to the interval and has a total reflecting feature.

Applicant should note that the term "adjacent" is defined in the Dictionary as "near to". In this aspect, the surface (45b) of the element (45) is disposed near to the interval defined by the first and second elements (41 and 45). As a result of the mentioned structure, the viewfinder inside the camera as provided by Miyamoto will reduce/restrain creation of ghost images and decenter aberration caused by the interval between the two surfaces of the two transparent bodies forming the image inverting unit.

Allowable Subject Matter

4. Claims 39-56 and 63-64 are allowed over the cited art.
5. Claims 2-19 and 58-59 are objected to as being dependent upon a rejected base claim, but would be allowable if each claims 2 and 58 is rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

6. Applicant's arguments filed on 10/22/2002 have been fully considered but they are not persuasive.

It is noted that applicant has argued that the art of Miyamoto does not disclose that the second prism has a surface facing the first transparent body wherein the surface is a total-reflection surface. The Examiner respectfully disagrees and

Art Unit: 2872

respectfully invited the applicant to review the art of Miyamoto. In particular, Miyamoto discloses that the second transparent prism (45) has only one reflective surface and two transmissive surfaces wherein the only reflective surface does face to the first transparent body (41) and totally reflect the light ray. Applicant should note that the term "adjacent" is defined in the Dictionary as "near to". In this aspect, the surface (45b) of the element (45) is disposed near to the interval defined by the first and second elements (41 and 45).

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

8. This application contains subject matter which is in condition for allowance except for the presence of claims 20-38 and 60-62 to an invention non-elected with

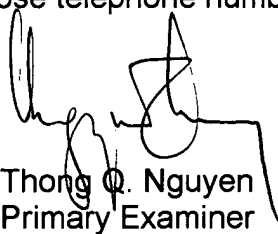

Art Unit: 2872

traverse in Paper No. 7. Applicant should cancel the noted claims or take other appropriate action (37 CFR 1.144) in response to this Office action.
